

NUINSCO RESOURCES LIMITED

MANAGEMENT'S DISCUSSION AND ANALYSIS

**FOR THE THREE AND NINE MONTHS ENDED
SEPTEMBER 30, 2022 AND 2021**

DATED NOVEMBER 24, 2022

NUINSCO RESOURCES LIMITED

MANAGEMENT'S DISCUSSION AND ANALYSIS

For the three and nine months ended September 30, 2022 and 2021

The following discussion of the results of operations and financial condition of Nuinsco Resources Limited ("Nuinsco" or "the Company") prepared as of November 24, 2022 consolidates management's review of the factors that affected the Company's financial and operating performance for the three and nine months ended September 30, 2022 and 2021, and factors reasonably expected to impact on future operations and results. This discussion is intended to supplement and complement the Company's unaudited condensed interim consolidated financial statements for the three and nine months ended September 30, 2022, and 2021 (the "Condensed Interim Consolidated Financial Statements") and the notes thereto, which were prepared in accordance with International Financial Reporting Standards ("IFRS" or "GAAP").

Certain information and discussion included in this Management's Discussion & Analysis ("MD&A") constitutes forward-looking information. Readers are encouraged to refer to the cautionary notes contained in the section Forward-Looking Statements at the end of this MD&A.

Readers are also encouraged to consult the audited consolidated financial statements for the years ended December 31, 2021 and 2020 ("2021 Audited Consolidated Financial Statements"). The Condensed Interim Consolidated Financial Statements and the 2021 Audited Consolidated Financial Statements are available at www.sedar.com and at the Company's website www.nuinsco.ca. All amounts disclosed are in Canadian dollars unless otherwise stated. All tabulated amounts are in thousands of Canadian dollars.

NATURE OF OPERATIONS

Nuinsco is a mineral exploration and development company that has operated successfully for several decades; throughout its history the Company has identified and explored numerous mineral occurrences leading to a number of mineral deposit discoveries including the Rainy River gold deposit in northwestern Ontario, now in production and owned by New Gold Inc. having been sold by the Company in 2004, the Lac Rocher nickel deposit in Quebec now owned by Victory Nickel Inc. ("Victory Nickel") and the Cameron Lake gold deposit in northwestern Ontario which is currently owned by First Mining Gold Corp. The Company's focus is identifying, exploring, and developing mineral investment opportunities domestically and internationally; the Company currently has interests in projects prospective for gold, critical minerals - including rare earth elements, niobium, tantalum, lithium, and rubidium - and phosphate, in the province of Ontario in Canada, and gold in Egypt.

The Company owns 100% of the very significant Prairie Lake project in northwestern Ontario, and is working to build shareholder value through systematic exploration and development on highly prospective mineralized terrane in a stable, mining friendly jurisdiction. As funding permits, work programs have been planned and executed on the Company's projects.

At the Prairie Lake project, a number of commodities of economic interest occur – significant rare earth element mineralization is widely distributed as well as niobium/tantalum, and phosphate. The Prairie Lake project hosts an 871.8 million tonne Inferred Mineral Resource (including 2.01 kg/t total rare earth oxides, plus niobium and phosphate and a 15.6 million tonne Indicated Mineral Resource including 1.67 kg/t total rare earth oxides, plus niobium and phosphate. The widespread distribution rare earth element mineralization, and particularly neodymium and praeosodymium, dominantly associated with phosphate mineralization, is fundamental to the exploration and development of the project; the demand for such elements is forecast to rise dramatically as electrification of the world's vehicle fleet progresses, and as new applications and technologies are introduced to the developing "green" economy. Extensive metallurgical testing optimized to phosphate recovery has demonstrated that a phosphate concentrate exceeding 30% P₂O₅ can be produced; given the size of the global agricultural industry the potential implications to the economics of the Prairie Lake as a phosphate producer are considerable.

The Sunbeam Gold Project is an opportunity for discovery of high-grade gold mineralization. The Company has explored and developed the project over the past several years with very positive results. An opportunity to monetize this asset arose and as a result the Company has entered into an option agreement on the project, allowing the Company to to deploy additional funds to other , notably the very prospective Prairie Lake and Zig Zag Lake.

In March 2021, the Company entered into an option agreement on the Dash Lake gold exploration project near Fort Frances, Ontario. Dash Lake is located in an area well known to the Company being relatively close to the Cameron Lake Gold Deposit and Rainy River Mine – both of which were discovered/developed by the Company.

On June 19, 2021, the Company executed an option agreement to acquire a 100% interest in the Zig Zag Lake lithium-tantalum property located approximately 68 kilometres east-northeast of Armstrong, Ontario. The Zig Zag Lake property consists of nine (6) claim units accessible via an all-weather gravel road leading east from Armstrong that approaches to

within two kilometres of the claims. An initial site visit was conducted to the project during Q3 2021 for the purpose of collecting grab samples to verify historic results; the analytical results produced are very prospective and further exploration on the project warranted and being planned.

The Company has been evaluating the economic viability of the El Sid gold waste dumps and tailings recovery project in the Eastern Desert of Egypt approximately 90km west of the Red Sea coast ("El Sid"). Three past producing gold mines are located on the project – the largest of which is the El Sid Mine that, between 1949 and 1957, was Egypt's largest gold producer. Nuinsco, through its Egyptian subsidiary Z-Gold Resources Limited ("Z-Gold"), has obtained the right to evaluate and exploit the waste dumps and tailings from the project owner, Shalateen Mineral Resources Company ("Shalateen"), a company established by the Egyptian Government. The results of the evaluation indicate that the project is economic using conservative estimation of economic parameters and could quickly produce revenue. The Company is in the process of arranging the capability to establish a gold processing plant on-site.

In addition to its property holdings, Nuinsco owns a limited participating interest in the net cash flows of Victory Nickel's frac sand business (the "Participating Interest"). In July 2022, Victory Nickel Inc. was petitioned into bankruptcy.

Going Concern

The Company's Condensed Interim Consolidated Financial Statements have been prepared using the going concern assumption, which contemplates the realization of assets and settlement of liabilities in the normal course of business as they come due. The Company has incurred a net loss of \$257,323 for the nine months ended September 30, 2022 (nine months ended September 30, 2021 – \$1,139,114) and has an accumulated deficit of \$106,460,829 (2021 - \$106,203,506). As at September 30, 2022, the Company had a working capital deficiency of \$704,464 (December 31, 2021 –\$390,644). Working capital deficiency is defined as current liabilities less current assets.

The Company is subject to the risks and challenges experienced by other companies at a comparable stage. These risks include, but are not limited to: continuing losses, dependence on key individuals, and the ability to secure adequate financing or to complete corporate transactions to meet the minimum capital required to successfully complete its projects and fund other operating expenses. Advancing the Company's projects through exploration and development to the production stage will require significant financing. Refer to Note 4 on Financial Risk Management and Capital Management to these Consolidated Financial Statements for additional information.

Although the Company has taken steps to verify title to the properties on which it is conducting exploration and in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee the Company's title. Property title may be subject to government licensing requirements or regulations, First Nations claims, unregistered prior agreements, social licensing requirements, unregistered claims, and non-compliance with regulatory and environmental requirements. The Company may also be subject to increases in taxes and royalties, renegotiation of contracts and political uncertainties.

None of the Company's projects are currently in commercial production and, accordingly, the Company is dependent upon debt or equity financings and the optioning and/or sale of resource or resource-related assets for its funding. The Company's ability to continue as a going concern, is dependent upon the Company's ability to finance exploitation of its projects through debt or equity financings and the optioning and/or sale of resource or resource-related assets for its funding.

The Company's management continues to be engaged in securing financing or the potential sale of assets. There are no assurances that the Company will be successful in obtaining any financing or selling assets, or in accomplishing that on a timely basis or on reasonable or acceptable terms, or at all. If the Company cannot obtain financing or otherwise improve liquidity, it will be unable to fund continuing operations and corporate administration costs.

If the Company is unable to obtain additional financing, it will be required to curtail all of its operations and may be required to liquidate its assets.

Should the Company not be able to continue to obtain the necessary financing, achieve favourable exploration results, achieve future profitable production or the sale of properties or improve its liquidity sufficient to enable it to fund operations, the Company's ability to continue as a going concern will be compromised. These conditions indicate the existence of a material uncertainty that may cast significant doubt about the Company's ability to continue as a going concern.

SIGNIFICANT EVENTS

Extensive sampling was conducted on Prairie Lake drill core to expand analytical coverage of the ubiquitous mineralization comprising rare earths, niobium, tantalum, and phosphate. The size of the mineralized domain makes the project a significant asset to the Company.

The Company commissioned a mineral resource estimate for the Prairie Lake project in late December 2021, announced the results on May 31, 2022, and filed a NI- 43-101 compliant technical report on July 15, 2022. Highlights of the mineral resource estimate include:

Very large Mineral Resource located in the heart of North America:

- 871.8 million tonne Inferred Mineral Resource including 2.01 kg/t total rare earth oxides (“TREO”), plus niobium and phosphate.
- 15.6 million tonne Indicated Mineral Resource including 1.67 kg/t TREO, plus niobium and phosphate.
- Located in the heart of North America in Ontario, Canada, a stable, mining friendly, jurisdiction.
- Near to transport and power infrastructure – ready access to markets, both domestic and international.
- Positioned to be a key North American source of Critical Minerals as identified by the Canadian government (rare earth elements (“REEs”) and niobium) to meet an anticipated enormous expansion in demand for such products.
- Substantial potential remains to expand and upgrade the initial Mineral Resource Estimate.
- Project is exceptionally close to the TransCanada Highway, rail, power and shipping infrastructure.
- Preliminary Economic Assessment to commence shortly.
- Further drilling to increase quantity and quality of the initial Mineral Resource is planned.

On October 3, 2022, the Company entered into an option agreement (the “**Agreement**”) with First Class Metals PLC (“**FCM**”) on the Company’s Sunbeam gold project (the “**Project**”).

Under the terms of the agreement, FCM can acquire a 100% interest in the Project on the following basis:

- making aggregate payments to Nuinsco of C\$700,000 in three tranches comprising:
 - C\$400,000 within 10 (ten) business days of the execution of the Agreement (received);
 - C\$150,000 prior to the four-month anniversary of execution of the Agreement; and,
 - C\$150,000 prior to the eight-month anniversary of execution of the Agreement;
- expending on the Project C\$750,000 in exploration expenses within three years of executing the Agreement, of which \$50,000 must be spent in the first year;
- paying to Nuinsco C\$250,000 upon estimating an Indicated Resource containing 250,000 ounces of gold, and paying to Nuinsco an additional C\$250,000 upon estimating an additional Indicated Resource containing 250,000 ounces of gold (for a total Indicated Resource containing 500,000 ounces of gold); and,
- providing to the Company a 1% net smelter return royalty.

The Company’s initial sampling at the Zig Zag Lake project returned very strong lithium grades peaking at 3.55% Li₂O, with remarkable tantalum, and rubidium results peaking at 836 ppm Ta₂O₅, and 4,003 ppm Rb₂O. The results are sufficiently prospective to warrant continued exploration.

The Company continues to evaluate the economic viability of El Sid and is in discussions to bring the project into production. The project received an environmental permit allowing for the construction of a processing plant at the site and acceptance of the technical and economic proposal for development and gold production.

OUTLOOK

Nuinsco’s intent on advancing its projects (in particular the recent receipt of the Prairie Lake project mineral resource estimate) highlights the very significant opportunity that the project presents to the Company and its shareholders.

The most recent focus of work on the Prairie Lake project has been the substantial sampling and analysis program from the project; to more thoroughly characterize the mineralization contained within the host intrusion and to have the analytical results available for inclusion into the mineral resource estimate completed in Q2 2022. Carbonatites contain the highest rare earth element (“REE”) contents of any of the igneous rocks, making them attractive exploration targets for REE mineralization;

particularly so considering the increasing concerns around the REE supply chain, the desirability to obtain supply from stable jurisdictions and government initiatives to achieve this, such as the Canadian Minerals and Metals Plan incorporating a list of Critical Elements including those of economic interest at the Prairie Lake project. The Prairie Lake complex has unusually high concentrations of REEs in apatite, and in particular neodymium and praseodymium. The REE content, with high proportional neodymium/praseodymium content, in association with other mineral commodities of economic interest, for instance niobium/tantalum, scandium, and phosphate makes it an immense and enormously attractive target demanding further investigation and development, made immeasurably more so by the excellent project logistics.

In prioritizing projects, the Company identified Prairie Lake and Zig Zag Lake as being higher priority assets at present. As such the Company negotiated an option agreement to monetize the Sunbeam Project, proceeds from which will be used to advance the other projects. The Company will receive cash payments from the recently completed option agreement, and will retain a NSR royalty on the project.

The Company continues to focus on El Sid because of the project's potential to provide access to cash. Management's view has been that El Sid has the potential to provide the necessary non-dilutive funding for the Company. Funding to build the project is a priority and the Company is actively engaged in discussions on a transaction on the project.

The Company acquired the Dash Lake project in northwestern Ontario. It is a gold exploration project located in proximity to prospective regional structures hosting gold mineralization and occurs in an area familiar to Nuinsco being situated approximately mid-way between the Cameron Lake Gold Deposit and the Rainy River Mine – both gold properties which Nuinsco discovered/developed and for which the Company produced the first mineral resource estimates. Numerous other projects have been worked by the Company in the region.

MINERAL PROJECTS

Prairie Lake

The Prairie Lake project, located near Marathon, Ontario, is a large multi-commodity deposit, hosted in a composite intrusion consisting of two predominant rock types, carbonatite and ijolite. It contains rare earth elements ("REEs"), niobium (Nb), tantalum (Ta), phosphate (P2O5), uranium (U), and other elements and compounds of economic interest. The Prairie Lake Project consists of 46 mining claims (27 single cell and 19 boundary cell mining claims), is owned 100% by the Company, is royalty-free and the mining-land tenure is secure for decades to come.

In June 2019 the Company received the results for previously unsampled drill core from the 2007 drilling program. This additional sampling of holes NP0702 and NP0714 significantly extended the known niobium (Nb), tantalum (Ta), phosphate (P₂O₅) intercepts in these holes and added assay information for rare earth elements (REE). When combined with previously reported sampling (see press release dated January 7, 2008), the new results extend the intersection in hole NP0714 to 45.9m 0.207 % Nb₂O₅ and 5.26 % P₂O₅ with 43 g/t Ta, between 4.1m and 50.0m, from the 17.45m length reported in 2008.

During Q3 and Q4 2019 Prairie Lake drill core was cut in preparation for sampling and analysis. A sampling program commenced in June 2021 with the intent of producing more extensive analytical coverage of the mineralized zones that have been identified in the previously reported Exploration Target. The sampling program was conducted during Q2 and Q3 and eventually incorporated sampling from 18 drill holes.

The Company announced completion of a Mineral Resource Estimate for the Prairie Lake project on May 31 2022 followed by filing of a NI 43-101 compliant technical report on July 15 (available on the Company's website www.nuinsco.ca). The pit constrained MRE consists of a 15.6 million tonne Indicated Mineral Resource and a very large 871.8 million tonne Inferred Mineral Resource. Along with the REE elements the MRE also includes niobium and phosphate in oxides; combined, these are expected to be key drivers to the economics of the project.

Prairie Lake Project Pit Constrained Mineral Resource Estimate⁽¹⁻⁶⁾

Class	Cut-Off	Tonnes	Rare Earth Oxides									Niobium	Phosphate
			Nd ₂ O ₃	Pr ₆ O ₁₁	Sc ₂ O ₃	CeO ₂	La ₂ O ₃	Sm ₂ O ₃	Ta ₂ O ₅	Y ₂ O ₃	TREO	Nb ₂ O ₅	P ₂ O ₅
	NSR C\$/t	M	g/t	g/t	g/t	g/t	g/t	g/t	g/t	g/t	kg/t	%	%
Indicated	30	15.6	344	96	15	754	300	58	28	100	1.67	0.16	3.71
Inferred	30	871.8	409	82	18	905	388	79	17	127	2.01	0.10	3.39

*TREO = Total Rare Earth Oxides: neodymium, Nd₂O₃; praseodymium, Pr₆O₁₁; scandium, Sc₂O₃; Cerium, CeO₂; lanthanum, La₂O₃; samarium, Sm₂O₃; tantalum, Ta₂O₅; yttrium, Y₂O₃.

1. *Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.*
3. *The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of the Inferred Mineral Resource could potentially be upgraded to an Indicated Mineral Resource with continued exploration.*
4. *The Mineral Resources were estimated in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions (2014) and Best Practices Guidelines (2019) prepared by the CIM Standing Committee on Reserve Definitions and adopted by the CIM Council.*
5. *US\$ Metal prices used were \$80/Kg Nd₂O₃, \$80/Kg Pr₆O₁₁, \$1,500/Kg Sc₂O₃, \$50/Kg Nb₂O₅, \$250/t P₂O₅, \$1.35/Kg CeO₂, \$1.35/Kg La₂O₃, \$3.50/Kg Sm₂O₃, Nil\$/t Ta₂O₅ and \$13.00/kg Y₂O₃, 0.78 FX all with combined process recoveries and payables of 50%, except P₂O₅ at 75%.*
6. *The constraining pit optimization parameters were C\$2.50/t mining cost for all material, C\$25/t process cost, C\$5/t G&A cost and 45-degree pit slopes with a C\$30/t NSR cut-off.*

Prairie Lake has the potential to produce a number of minerals and elements for industries which are forecast to require substantially increasing supply over the coming years, for electrification of the global vehicle fleet, massive expansion of renewable energy infrastructure, and applications in high-tech and “green” industries that require the REEs and niobium to develop the infrastructure and applications of a low carbon economy. Prairie Lake could also be a very significant source of phosphate or other products with agricultural applications – phosphate is a compound with vital agricultural and industrial applications and carbonatites are used elsewhere as soil amendment additives to neutralize acids in soils. The use of calcium phosphate in agriculture is essential in sustaining crop yields to supply an increasing world population. Other compounds with industrial applications are also being examined for economic viability. The abundance and diversity of minerals in the rocks that comprise the Prairie Lake complex provides broad scope for potential exploitation – the Company continues to evaluate the options to determine those elements and minerals that provide the greatest economic potential and return.

The Prairie Lake complex hosts a suite of elements of economic interest identified as Critical Elements defined under the Canadian Minerals and Metals Plan within a very large domain of mineralized rock that is extremely favourably located from a logistical perspective with rail, road, shipping, and power infrastructure already established. The project is a very significant asset.

Sunbeam Gold Property – as noted above the Company has optioned this project to FCM.

The Sunbeam Gold Property consists of 110 unpatented mining claims (218 cells), covering 48.8km², situated 27km northeast of the town of Atikokan, Ontario, and 12km southeast of Agnico Eagle’s Hammond Reef gold deposit. It is easily accessible via well maintained logging roads from Hwy 11.

Egypt

Nuinsco has retained a presence in Egypt through its interest in Egypt-based Z-Gold Limited (“Z-Gold”). Management regards the country as an underexplored opportunity for mineral exploration and development. In 2018, Nuinsco (through Z-Gold) won a competitive bid for the right to evaluate the viability of gold production from waste dumps and tailings at the past-producing El Sid mine in Egypt.

Located in Egypt’s Eastern Desert, approximately 90km west of the town of Quseir on the Red Sea coast, El Sid is easily accessible via a paved road that passes through the project site. Three past producing gold mines are located on the project – the largest of which is the El Sid Mine which operated primarily between 1949 and 1957 and was Egypt’s largest gold producer. The mines were high-grade – averaging more than 30 g/t gold. Estimates are that the accumulated dumps and tailings on surface at the site amount to more than 300,000 tonnes with an average grade exceeding 3.0 g/t gold for a total of about one tonne (approximately 32,151 troy ounces) of contained gold (all estimates are based upon historic information and Nuinsco is not treating this information as a current mineral resource or mineral reserve).

Of significance to potential exploitation is the fact that the rock adjacent to the exploited veins also carried gold but was rejected and dumped as waste. This waste is available for processing and gold recovery with potentially a very short timeline to gold production. The occurrence of broken mineralized rock in the waste dumps and tailings piles already at surface streamlines the process and reduces the cost of evaluation of grade, tonnage, metallurgy and exploitation. As a result, capital and operating costs are anticipated to be low and the timeline to production and revenue generation short relative to conventional underground mine development.

Three site visits have been conducted to El Sid during which sampling was conducted: the average grade of all 565 samples collected from the waste dump at El Sid is 4.41g/t gold. Metallurgical testing by MetSolve Laboratory in Langley, BC has shown that a combination of gravity and leaching or flotation provides very good gold recovery. The results of the economic evaluation indicate that the El Sid project is economic using conservative estimation of economic parameters and it could quickly produce. The Company is now in negotiations to source capital funding to build the project.

In August 2021, the Company announced achievement of two significant milestones toward development of its El Sid gold project: receipt of an environmental permit allowing for the construction of a processing plant at the site and acceptance of the technical and economic proposal for development and gold production.

Definitive agreement

The Company executed a definitive agreement (the "Agreement") for El Sid on November 7, 2018. The Agreement has been executed between Shalateen Mineral Resources Company which holds the right to exploit the dumps and tailings, and Z-Gold.

The Company continues to evaluate other mineral exploration, mining and processing opportunities in Egypt.

Zig Zag Lake

The Zig Zag Lake lithium-tantalum property is located approximately 68 kilometres east-northeast of Armstrong, Ontario. The claim group covers the historic Tebishogeshik occurrence as well as other mineralized sites - the lithium-tantalum mineralization is pegmatite-hosted with significant rubidium and cesium mineralization also reported. Critical minerals such as these are essential in the accelerating transition to a low-carbon and digitized economy.

The Zig Zag Lake property consists of nine (6) claim units accessible via an all-weather gravel road leading east from Armstrong that approaches to within two kilometres of the claims.

During Q3 2021 a site visit was conducted to the project to obtain grab samples for comparison with historic results and to evaluate ground conditions and access. The results of the sampling demonstrate that grades of economic significance for lithium, tantalum, and rubidium are indeed present on the project. On 17 November 2021 the Company reported results peaking at 3.55% Li₂O, 836 ppm Ta₂O₅, and 4,003 ppm Rb₂O within the pegmatite intrusion that is known to be at least 800m in length and fully encompassed by the Nuinsco Property.

As with the Prairie Lake project the Zig Zag Lake project is host to elements of economic interest, particularly lithium and tantalum, identified as Critical Elements defined under the Canadian Minerals and Metals Plan.

Dash Lake

Nuinsco has expanded its prospective gold property holdings with an option agreement to acquire a 100% interest in the Dash Lake gold project located 50 kilometres northwest of Fort Francis, Ont. in the prolifically gold mineralized Kakagi-Rowan Lake Greenstone Belt. The property comprises nine (9) mining claims (consisting of 121 cells) encompassing 24.5 km². It is located in the Kakagi-Rowan greenstone belt of the Wabigoon Subprovince approximately 50 km NW of the town of Fort Frances.

The Project is underexplored, encompasses, and is near, several historic gold showings, and is accessible via logging roads. The terrain is well known to the Company which has extensive experience conducting exploration in the region. The Company's work programs have led to gold discoveries at Cameron and Rowan lakes and in Richardson Township at what is now the producing Rainy River Mine.

During June 2022 initial geological mapping and sampling was conducted over part of the project – extensive traversing over the northern claims identified new alteration and sulphide mineralisation within sheared mafic metavolcanic rock. Further work will be conducted.

RESULTS OF OPERATIONS

Three and nine months ended September 30, 2022 compared to the three and nine months ended September 30, 2021

Revenues

The exploration properties of the Company are still in the early exploration and development stage. Until sufficient work has been completed to confirm the feasibility of any specific interest being placed into production, it is not anticipated that the Company will have any material production revenue.

An excerpt of the expenses and other items for the three and nine months ended September 30, 2022 and 2021:

(in Canadian dollars)	Notes	Three months ended September 30,		Nine months ended September 30,	
		2022	2021	2022	2021
Operating expenses					
General and administrative	a	\$ 81,819	\$ 108,576	\$ 292,341	\$ 298,739
Share-based payments	b	-	225,000	-	1,242,425
Royalty payments	c	-	-	20,000	-
Depreciation of property and equipment		234	193	702	661
Operating loss		(82,053)	(333,769)	(313,043)	(1,541,825)
Other income					
Consulting income	d	-	-	10,000	-
Gain on settlement of debt		7,500	-	7,500	-
Gain on sale of equipment		-	-	5,500	-
Exclusivity income	e	-	-	32,720	-
Flow-through premium	f	-	-	-	68,942
Net loss and comprehensive loss for the period		(74,553)	(333,769)	(257,323)	(1,472,883)

During the three and nine months ended September 30, 2022, the Company worked on its projects, with a focus on advancing Prairie Lake. The Company continued to carry on corporate activities, held discussions with various parties for financings and other business development opportunities.

- General and administrative expenses consisted of accrued management and directors' fees, rent, salary for administrative staff, insurance, transfer agent, legal and other administrative costs to maintain the Company in good standing.
- Represents the value of stock options that were issued and vested during the period.
- The Company paid a pre-production royalty payment in accordance with an agreement on the Sunbeam project.
- The Company had a consulting contract in Q1 2022 to generate income to help support administrative expenses.
- The Company entered into two separate agreements (one related to the Sunbeam project, and the other on El Sid), granting an exclusivity period for interested parties in exchange for a fee.
- During Q4 2021, the Company issued flow through shares. For accounting purposes, the proceeds from issuance of these shares are allocated between the offering of shares and the sale of tax benefits. The allocation was made based on the difference between the price of a non-flow through share and the amount the investor paid for the flow-through share. A liability was recognized for this difference. In Q1 2022, the liability was reduced and the reduction of premium liability was recorded in other income on the date when the Company filed the appropriate renunciation forms with the Canadian taxation authorities.

SUMMARY OF QUARTERLY RESULTS

Selected financial information for each of the last eight quarters ended is as follows:

	3 rd Quarter 2022	2 nd Quarter 2022	1 st Quarter 2022	4 th Quarter 2021
Net loss	\$ (74,553)	\$ (95,257)	\$ (87,512)	\$ (850,825)
Total comprehensive loss	\$ (74,553)	\$ (95,257)	\$ (87,512)	\$ (850,825)
Loss per share - basic and diluted	\$ (0.00)	\$ (0.00)	\$ (0.00)	\$ (0.00)

	3 rd Quarter 2021	2 nd Quarter 2021	1 st Quarter 2021	4 th Quarter 2020
Net loss	\$ (333,769)	\$ (539,178)	\$ (599,936)	\$ (264,386)
Total comprehensive loss	\$ (333,769)	\$ (539,178)	\$ (599,936)	\$ (264,386)
Loss per share - basic and diluted	\$ (0.00)	\$ (0.00)	\$ (0.00)	\$ (0.00)

Variations in the quarterly results of operations are largely a function of the timing of financings, property and other write-downs, gains on sales of properties, income tax recoveries, the recording of amortization of flow-through premiums and the recognition of gains on derivatives or other fair value changes recognized through operations.

LIQUIDITY AND CAPITAL RESOURCES

As at September 30, 2022, the Company had a working capital deficiency of \$704,464 (December 31, 2021 – working capital deficiency of \$390,644).

The Company had a decrease of cash and cash equivalents of \$122,741 for the nine months ended September 30, 2022, compared with an increase of \$84,705 for the nine months ended September 30, 2021. The decrease in 2022 was the result of \$119,333 of cash from operating activities, and \$62,000 (\$32,000 from exercise of stock options and \$30,000 from a private placement). The cash inflows were offset \$304,574 of cash used on investing activities for expenditures on the Company's projects. In 2021, the Company generated cash of \$1,107,253 (\$701,703 from the exercise of stock options and \$405,550 from the issuance of common shares), which was the reason of the increase in cash for that period.

At its current operating level, the Company will not have sufficient funds to cover short-term operational needs. The Company expects to still operate at a loss for at minimum the next 12 months. To help with the liquidity issues, management and directors have been deferring compensation, and have in the past, settled part of these fees in exchange for common shares (to help preserve cash). As such, the Company will need additional financing for costs related to corporate operations and exploration activities. The Company is currently addressing its liquidity concerns by proactively planning future financings through the sale of equity and/or the sale of mineral properties. The Company has been successful in the past at raising necessary funds but the timing and ability to do so will depend on the liquidity of the financial markets, economic conditions, as well as the acceptance of investors to small cap companies. There can be no guarantee that the Company will be able to secure any required financing.

The primary need for liquidity is to fund exploration programs and to maintain general corporate operations. The primary source of liquidity in the past has primarily been private financings and the sale of the Company's mineral properties.

Overall, given the working capital deficiency at September 30, 2022, the Company will not be able to meet its general operational requirements for 2022, and will require additional capital for exploration programs in 2022 and to funds operations.

As described above, management is continuing to actively pursue additional ways to realize on the potential of its assets or secure financing in order to continue to provide funds for operations in light of the current difficult economic circumstances. Flow-through financings can be used for domestic work programs but do not provide the funding necessary to meet corporate or foreign expenditures which do not qualify for flow-through eligibility.

The Company's management continues to hold discussions on securing financing. There are no assurances that the Company will be successful in obtaining any form of financing on a timely basis or on reasonable or acceptable terms, or at all. If the Company cannot obtain financing or otherwise improve liquidity, then the Company's treasury will be depleted and it will be required to curtail all of its operations and may be required to liquidate its assets under a formal process. Failure to continue as a going concern would require that the Company's assets and liabilities be restated on a liquidation basis, which would differ from the going concern basis.

To help alleviate liquidity issues, Subsequent to the end of the quarter the Company entered into an option agreement on the Sunbeam project which will result in total payments to the Company of \$700,000.

CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS

Critical accounting estimates used in the preparation of the Condensed Interim Consolidated Financial Statements include determining the carrying value of investments and Evaluation and Exploration (“E&E”) projects, assessing the impairment and classification of long-lived assets, assessing the allocation of assets into their components, the fair value of the Participating Interest and the valuation of share-based payments and warrants, assessing the value of deferred income tax assets and the disclosure of contingencies and going concern matters. These estimates involve considerable judgement and are, or could be, affected by significant factors that are out of the Company’s control.

For a complete list of the significant accounting policies as well as information concerning the use of estimates, judgements and measurement uncertainty, reference should be made to Notes 2 to the 2021 Audited Consolidated Financial Statements. The Company’s Condensed Interim Consolidated Financial Statements have been prepared using the going concern assumption.

The recorded value of the Company’s E&E projects is based on historic costs (subject to impairment) that are expected to be recovered in the underlying mineral resources associated with the properties. The Company is in an industry that is exposed to a number of risks and uncertainties and there is always the potential for a material adjustment to the value assigned to these assets.

The fair value of the share-based payments, until exercise, is calculated using the Black-Scholes option-pricing model that takes into account the exercise price, the expected life of the option/warrant, expected volatility of the underlying shares, expected dividend yield and the risk-free interest rate for the term of the option/warrant.

The Company has determined that it is not probable that it will generate returns sufficient to utilize its taxable losses prior to their expiry. This is a significant judgement that, dependent upon future events, may turn out to be incorrect.

NEW ACCOUNTING POLICIES

There have been no new accounting policies adopted by the Company that have had a material impact.

CORPORATE GOVERNANCE

As noted above, the Company’s Board of Directors is responsible for ensuring that management fulfils its responsibilities for financial reporting and internal control and exercises this responsibility principally through the Audit Committee. The Audit Committee, which is comprised of directors, none of whom are employees or officers of the Company, meets with management to review the Condensed Interim Consolidated Financial Statements to satisfy itself that management is properly discharging its responsibilities to the directors who approve the financial statements.

The Board of Directors has an Audit Committee consisting of financially literate directors, the majority of whom are independent and unrelated. Other committees of the Board of Directors are the Corporate Governance and Nominating and Compensation Committee.

RELATED PARTY TRANSACTIONS AND BALANCES

Related Party Balances and Transactions

Short-term employee benefits provided by the Company to key management personnel include salaries, consulting fees and directors’ fees. The Company’s non-monetary benefit package for key management personnel is the same as that available to all full-time employees. In addition to short-term employee benefits, the Company may also issue shares as part of the Share Bonus Plan and the Stock Option Plan.

Transactions with related parties for the nine months ended September 30, 2022 and September 30, 2021 are shown in the following table:

	2022	2021
Short-term employee benefits	\$ 216,375	\$ 216,375
Share-based compensation	-	1,155,898
	\$ 216,375	\$ 1,372,273

During the nine months ended September 30, 2022, the Company was charged \$36,000 (2021 - \$36,000) by CFO Advantage Inc., a company controlled by Kyle Appleby, the Chief Financial Officer of the Company. As at September 30, 2022, \$182,900 of such fees (December 31, 2021 - \$146,900) is included in accounts payable and accrued liabilities.

During the nine months ended September 30, 2022, the Company was charged \$112,500 (2021 - \$112,500) by Paul Jones, the Chief Executive Officer of the Company. As at September 30, 2022, \$1,087,500 (December 31, 2021 - \$975,000) is owing for management fees and is included in long-term liabilities (Note 11 to the Condensed Interim Consolidated Financial Statements). The Company also owes Mr. Jones \$3,450 for expenses paid for on behalf of the Company and advances.

During the nine months ended September 30, 2022, the Company was charged \$36,000 (2021 - \$36,000) by Sean Stokes, Executive Vice President of the Company. As at September 30, 2022, \$282,000 (December 31, 2021 - \$251,000) is owing and included in long-term liabilities (Note 11 to the Condensed Interim Consolidated Financial Statements).

As at September 30, 2022, two directors are owed a total of \$22,000 for funds advanced to the Company with no interest, and no terms of repayment. The Company had no other sources of financing available at the time and the advances were essential to maintaining the Company in good standing.

CONTINGENCIES

Nuinsco has been served with a third-party claim related to 30-year-old historical transaction. Documents have been requested from the opposing parties, to which we are waiting final receipt of all documents. Once those documents are received, they will be considered with a view to understanding the implications of the claim. Based on information received to date, the Company considers the claim without merit.

OUTSTANDING SHARE DATA

As at the date of this report, the Company had 573,804,012 common shares issued and outstanding. In addition, there were 70,949,311 stock options and 41,798,500 warrants outstanding.

RECENT DEVELOPMENTS

There have been no additional developments not already discussed elsewhere in this MD&A.

RISKS AND UNCERTAINTIES

The exploration and development of natural resources are speculative activities that involve a high degree of financial risk. The risk factors which should be taken into account in assessing Nuinsco's activities and an investment in its securities include, but are not necessarily limited to, those set out below.

The relative significance of each risk described below will vary as a function of several factors including, but not limited to, the state of the economy, the stage of Nuinsco's projects, the availability of financing on acceptable terms and other matters.

Any one or more of these risks could have a material adverse effect on the value of any investment in Nuinsco and the business, financial condition or operating results or prospects of Nuinsco and should be taken into account in assessing Nuinsco's activities.

Financing and Going Concern

The liquidity position of Nuinsco is extremely restricted and the continued operation of the Company depends upon the ability to obtain financing through the sale of assets, including project interests, or other means. Generally, there is no assurance that the Company will be successful in obtaining the required financing or achieving other means of securing liquidity on a timely basis or on acceptable terms.

If the Company is unable to obtain additional financing, the Company will be required to curtail activities and may be required to liquidate its assets. Failure to continue as a going concern would require that the Company's assets and liabilities be restated on a liquidation basis which would likely differ significantly from the going concern basis. Ongoing exploration and development of the Company's properties will require substantial additional capital investment. Failure to secure additional financing, and/or secure other funds from asset sales, would result in delaying or infinite postponement of development of these properties. There can be no assurance that additional financing will be available or that, if available, will be on terms favourable or acceptable to the Company.

Loss of Participating Interest

The Company holds an unsecured Participating Interest in the cash flows generated from the sale of frac sand as described in the Audited Consolidated Financial Statements and elsewhere in this MD&A. Presently, the Company is uncertain as to when it may receive any cash flows from the Participating Interest. There can be no assurance that Victory Nickel will be able to restructure all of its debt and/or recapitalize and there is no certainty as to what steps the lenders may take in light of these defaults. As a result, the possibility exists that Nuinsco may lose its Participating Interest and any potential value associated therewith.

Industry Risks

Speculative Nature of Mineral Exploration

Mineral exploration is highly speculative in nature, involves many risks and frequently is non-productive. There is no assurance that Nuinsco's results will be successful. Few properties that are explored are ultimately developed into economically-viable operating mines. Success in establishing reserves is a result of a number of factors, including the quality of Nuinsco's management, level of geological and technical expertise, the quality of land available for exploration and other factors. Once mineralization is discovered, it may take several years in the initial phases of drilling until production is possible, during which time the economic feasibility of production may change. Substantial expenditures are required to establish proven and probable reserves through drilling to determine the optimal extraction method for the ore and the metallurgical process to extract the metals from the ore and, in the case of new properties, to construct mining and processing facilities. It is possible that even preliminary due diligence will show adverse results, leading to the abandonment of projects. It is impossible to ensure that preliminary feasibility studies or full feasibility studies, on Nuinsco's projects or the current or proposed exploration programs on any of the properties in which Nuinsco has exploration rights will result in a profitable commercial mining operation. As a result of these uncertainties, no assurance can be given that Nuinsco's exploration programs will result in the establishment or expansion of resources or reserves. Furthermore, Nuinsco cannot give any assurance that its current and future exploration activities will result in the discovery of mineral deposits containing mineral reserves.

Evaluation and Development Projects

In general, evaluation and development projects have no operating history upon which to base estimates of future cash operating costs. For evaluation and development projects such as those projects that Nuinsco has an interest in, estimates of proven and probable reserves are, to a large extent, based upon the interpretation of geological data obtained from drill holes and other sampling techniques and feasibility studies. This information is used to calculate estimates of the capital cost, cash operating costs based upon anticipated tonnage and grades of ore to be mined and processed, the configuration of the ore body, expected recovery rates, comparable facility and equipment operating costs, anticipated climatic conditions and other factors. In addition, there remains to be undertaken certain feasibility and development preparation work on the projects that could adversely impact estimates of capital and operating costs required for the development of the projects. Costs necessary to develop the projects could be significant and will have a direct impact on the economic evaluation of the projects. As a result, it is possible that the actual capital cost, cash operating costs and economic returns of the projects may differ from those currently estimated.

Competition

The mineral exploration business is highly competitive in all of its phases. Nuinsco competes with numerous other companies and individuals, including competitors with greater financial, technical and other resources than Nuinsco, in the search for and acquisition of exploration and development rights on attractive mineral properties. Nuinsco's ability to acquire exploration and development rights in the future will depend not only on its ability to develop the properties on which it currently has exploration and development rights, but also on its ability to select and acquire exploration and development rights on other suitable properties. There is no assurance that Nuinsco will compete successfully in acquiring exploration and development rights on such other properties.

Operational Risks

Limited History of Operations

Nuinsco has a limited history of earnings and limited financial resources. Nuinsco currently has no operating mines and its ultimate success will depend on its ability to generate cash flow from active mining operations in the future, as well as its ability to access capital markets for its development requirements.

Development Targets, Permitting and Operational Delays

There can be no assurance that Nuinsco will be able to complete the planned development of the projects on time or on budget due to, among other things, delays in receiving required consents, permits and registrations, the delivery and installation of plant and equipment and cost overruns, or that the current personnel, systems, procedures and controls will be adequate to support Nuinsco's operations. Any failure to meet development targets or other operational delays or inadequacies could have a material adverse effect.

Resources and Reserves

Figures relating to mineral resources and mineral reserves are estimates and no assurance can be given that the anticipated level of recovery and/or grades of mineral reserves or mineral resources will be realized. Moreover, short-term operating factors relating to ore reserves and resources, such as the need for orderly development of an ore body or the processing of new or different ore grades, may cause a mining operation to be unprofitable in any particular accounting period.

Title Risks

Nuinsco's ability to hold various mineral rights require licences, permits and authorizations and, in some cases, renewals of existing licences, permits and authorizations from various governmental and quasi-governmental authorities. Management believes that Nuinsco currently holds or has applied for all necessary licences, permits and authorizations to carry on the activities which Nuinsco is currently conducting and to hold the mineral rights Nuinsco currently holds under applicable laws and regulations in effect at the present time. Management also believes that Nuinsco is complying in all material respects with the terms of such licences, permits and authorizations. However, Nuinsco's ability to obtain, sustain or renew such licences, permits and authorizations on acceptable terms is subject to changes in regulations and policies and to the discretion of the applicable governmental and quasi-governmental bodies.

Insurance Risk

Nuinsco faces all of the hazards and risks normally incidental to the exploration of precious and base metals, any of which could result in damage to life or property, environmental damage and possible legal liability for any or all such damage caused. Nuinsco's activities may be subject to prolonged disruptions due to weather conditions depending on the location of operations in which Nuinsco has interests; not all such risks are insurable.

Financial and Investment Risks

Substantial Capital Requirements

Nuinsco will have to make substantial capital expenditures for the development of and to achieve production from the projects. There can be no assurance that any debt or equity financing or cash generated by operations will be available or sufficient to meet these requirements or for other corporate purposes or, if debt or equity financing is available, that it will be on terms acceptable to Nuinsco. Moreover, future activities may require Nuinsco to alter its capitalization significantly. The inability of Nuinsco to access sufficient capital for its operations could have a material adverse effect on its financial condition, results of operations or prospects. Flow-through financing cannot be used to fund the Company's corporate costs or foreign projects.

Market Perception

Market perception of junior exploration, development and mining companies may continue to shift such that these companies are viewed even less favourably. This factor could impact the value of investors' holdings and Nuinsco's ability to raise further funds by issue of additional securities or debt.

Metal and Mineral Prices

There is no assurance that, even if commercial quantities of mineral resources are developed, a profitable market will exist for the sale of such product. Metal prices fluctuate on a daily basis and are affected by numerous factors beyond Nuinsco's control – including factors which are influenced by worldwide circumstances. The level of interest rates, the rate of inflation, world supply of precious and base metals and stability of exchange rates can all cause significant fluctuations in precious and base metal prices. Such external economic factors are in turn influenced by changes in international investment patterns and monetary systems and political developments. The prices of precious and base metals have historically fluctuated widely and future price declines could cause commercial production to be uneconomical and such fluctuations could have a material adverse effect on Nuinsco's business, financial condition and prospects. Given the stage of development of Nuinsco's projects, the above factors have had no material impact on present operations but are considered in evaluating the impairment of long-lived assets.

Regulatory Risks

Government Regulation

Existing and possible future environmental and social impact legislation, regulations and actions, including the regulation of air and water quality, mining reclamation, solid and hazardous waste handling and disposal, the promotion of occupational health and safety, the protection of wildlife and ecological systems and the protection of the societies and communities of indigenous peoples, could cause significant expense, capital expenditures, restrictions and delays in the Company's activities, the extent of which cannot be predicted and which may well be beyond Nuinsco's capacity to fund. Environmental laws are becoming more actively enforced. Environmental and social impact studies may be required for some operations and significant fines and clean-up responsibilities may be assessed for companies causing damage to the environment in the course of their activities.

Economic, Political, Judicial, Administrative, Taxation or Other Regulatory Factors

Nuinsco may be adversely affected by changes in economic, political, judicial, administrative, taxation or other regulatory factors in the areas in which Nuinsco does or will operate and holds its interests, as well as unforeseen matters.

Other Risks

Environmental and Health Risks

The Company has no significant exposure to environmental or health risks, although this will change should any of the Company's projects approach production (a normal characteristic of mineral industry projects). Please also see ***Unfavourable Global Economic Conditions below***.

Key Personnel

Nuinsco relies on a limited number of key consultants and there is no assurance that Nuinsco will be able to retain such key consultants or other senior management. The loss of one or more of such key consultants or members of senior management, if not replaced, could have a material adverse effect on Nuinsco's business, financial condition and prospects. Directors and management have previously accepted deferrals of remuneration in order to assist the Company through the economic turmoil; however, this potentially adds to the risk of losing experienced personnel.

Conflicts of Interest

Certain of Nuinsco's directors and officers are also directors and officers of other natural resource companies. Consequently, there exists the possibility for such directors and officers to be in a position of conflict. Any decision made by any of such directors and officers relating to Nuinsco will be made in accordance with their duties and obligations to deal fairly and in good faith with Nuinsco and such other companies.

Foreign Operations

Nuinsco's investments in foreign countries carry certain risks associated with different political, business, social and economic environments. The ability to carry on business in any country can be affected by possible political or economic instability in that country. Changes in mining or investment policies or shifts in political attitude may adversely affect private business. The effect of these factors cannot be accurately predicted. Should the respective government later seek to control any aspect of production, distribution or pricing of gold or precious metals, Nuinsco runs the risk that, at any time, its operations may be terminated for failure to comply with any permit, rule or regulation; or that its operations may prove to be unprofitable if the costs of compliance with such governmental regulations prove to be excessive.

There is a risk that the necessary permits, consents, authorizations and agreements to implement planned exploration, project development or mining may not be obtained under conditions, or within time frames, that make such plans economic, that applicable laws, regulations or the governing authorities will change or that such changes will result in additional material expenditures or time delays.

As with Canadian projects, the acquisition and retention of title to mineral rights is a detailed and time-consuming process. Title to, and the area of, mineral resource claims may be disputed or challenged. Nuinsco's right to explore for, mine, produce and sell metals will be based on the respective governing agreement. Should Nuinsco's rights under any agreement not be honoured or be unenforceable for any reason, or if any material term of the agreements is unilaterally changed or not honoured, including any boundaries of properties, Nuinsco's ability to explore and produce metals in the future would be materially and adversely affected.

Nuinsco regularly and routinely considers the risks inherent in foreign jurisdictions and weighs such risks when evaluating continued, enhanced, reduced or renewed involvement in foreign projects.

Unfavourable Global Economic Conditions

The Company's results of operations could be adversely affected by general conditions in the global economy and in the global financial markets. A severe or prolonged economic downturn could result in a variety of risks to the business, including the Company's ability to raise additional capital when needed on acceptable terms, if at all. Any of the foregoing could harm the Company's business and management cannot anticipate all of the ways in which the current or future economic climate and financial market conditions could adversely impact the business. For example, in early 2020, COVID-19 was reported in many countries around the globe. The extent to which the COVID-19 impacts the Company and its results will depend on future developments that are highly uncertain and cannot be accurately predicted, including new information which may emerge concerning the severity of COVID-19 and the actions required to contain the COVID-19 or remedy its impact, among others.

Summary

The future success of the Company is subject to a number of risk factors that are common to the junior natural resources sector as well as those specific to the Company. Currently, the most significant risk is the ability of the Company to meet its cash obligations as they come due as the Company currently has very limited funds. Other risks include obtaining necessary financing under acceptable terms or finding strategic partners to fund expenditure commitments as they fall due, the extent to which it can outline natural resources on its properties and establish the economic viability of developing those

properties and the political, economic and legislative stability of the territories in which the Company's interests are located. Furthermore, the development of any natural resource interest may take years to complete and the resulting income, if any, from the sale of any natural resources produced by the Company is largely dependent upon factors that are beyond its control, such as costs of development, operating costs and the market value of the end product. Such risks are likely to be more extensive in foreign jurisdictions.

FORWARD-LOOKING STATEMENTS

Forward-Looking Information: This MD&A contains forward-looking information. All statements, other than statements of historic fact, that address activities, events or developments that the Company believes, expects or anticipates will or may occur in the future (including, without limitation, statements regarding estimates, working capital, ability to maintain operations and/or assumptions in respect of production, revenue, cash flow, financing, the probability of cash flows from the Participating Interest, costs, economic return, net present value, mine life and financial models, mineral resource estimates, potential mineralization, potential mineral resources, timing of possible production and the Company's development plans and objectives) constitute forward-looking information. This forward-looking information reflects the current expectations or beliefs of the Company based on information currently available to the Company. Forward-looking information is subject to a number of risks and uncertainties that may cause the actual results of the Company to differ materially from those discussed in the forward-looking information, and even if such actual results are realized or substantially realized, there can be no assurance that they will have the expected consequences to, or effects on the Company.

Factors that could cause actual results or events to differ materially from current expectations include, among other things: uncertainties relating to the availability and costs of financing needed in the immediate future to permit the Company to continue to operate; uncertainty of estimates of capital and operating costs, production estimates and estimated economic return; the possibility that actual circumstances will differ from estimates and assumptions; uncertainty of amount and timing of cash flows from the Participating Interest; failure to establish estimated mineral resources; fluctuations in commodity prices and currency exchange rates; inflation; recoveries being less than those indicated by the testwork carried out to date (there can be no assurance that recoveries in small scale laboratory tests will be duplicated in large tests under on-site conditions or during production); changes in equity or debt markets; operating performance of facilities; environmental and safety risks; delays in obtaining or failure to obtain necessary permits and approvals from government authorities; unavailability of plant, equipment or labour; inability to retain key management and personnel; changes to regulations or policies affecting the Company's activities; the uncertainties involved in interpreting geological data; and the other risks disclosed under the heading "Risks and Uncertainties" and elsewhere. Any forward-looking statement speaks only as of the date on which it is made and, except as may be required by applicable securities laws, the Company disclaims any intent or obligation to update any forward-looking information, whether as a result of new information, future events or results or otherwise. Although the Company believes that the assumptions inherent in the forward-looking information are reasonable, forward-looking information is not a guarantee of future performance and accordingly undue reliance should not be put on such information due to the inherent uncertainty therein.
