

## NUINSCO ANNOUNCES CAMERON LAKE INFRASTRUCTURE ENHANCEMENT

Toronto, December 20, 2005 – The continuing and sustained rally in the price of gold is leading Nuinsco Resources Limited (TSX: NWI, [www.nuinsco.ca](http://www.nuinsco.ca)) to re-evaluate options with regard to its Cameron Lake gold project in northwestern Ontario. The Company has entered into an agreement to refurbish the 28km road to the Cameron Lake deposit with the addition of drainage, culverts and resurfacing. In excess of \$450,000 will be allocated to this work which will significantly improve access to the site and will be used to transport forest products also.

Nuinsco's Cameron Lake Deposit represents a substantial gold resource and, the Company believes, an undervalued asset in its portfolio. The project was developed in the late 1980s when a production scale decline was advanced to the 260m level with three levels of development at 110m, 150m and 209m. Diamond drilling has demonstrated that the gold mineralisation extends to greater than 600m within the host Cameron Lake Shear Zone. A 43-101 compliant resource estimate was commissioned in 2004, (see press release dated April 28, 2004) the results of which are tabulated below (the study employed a 3.5 g/t Au cut-off, a grade cap of 50 g/t Au and a gold price of \$US 375/oz). Analyses have been conducted by ALS Chemex of Vancouver, B.C.

Above 305 m	Tonnes	Au g/t	Au oz
Measured	187,000	6.77	40,700
Indicated	380,000	6.44	78,700
Inferred	258,000	6.02	49,900

Below 305 m	Tonnes	Au g/t	Au oz
Measured			
Indicated	5,000	5.62	900
Inferred	754,000	4.94	119,800

Considerable potential remains to increase the deposit resource at depth and rising gold prices enhance the overall economics of the project. Diamond drilling conducted by Nuinsco in 2003 and 2005 continue to demonstrate continuity of mineralisation and grade consistent with historic results. Nuinsco is actively examining ways to advance the Cameron Lake Project as well as explore other targets in the region.

Technical supervision of the program is being conducted by P.L.Jones, Nuinsco's V.P. of Exploration, who under National Instrument 43-101 is Nuinsco's Qualified Person for the project.

Nuinsco is an exploration and development company with a uranium property in Saskatchewan, nickel projects in Manitoba and Quebec, and base metal projects in Ontario and Turkey. Shares of Nuinsco trade on the Toronto Stock Exchange under the symbol NWI. U.S.S.E.C. exemption: 12g 3-2(b) #82-1846. The website address is: [www.nuinsco.ca](http://www.nuinsco.ca)
